

IN THE ABSTRACT:

Please amend the Abstract of the invention as follows:

The present invention relates to systems and methods for audio processing. For example, the present invention provides systems and methods for creating standardized text for streaming text application from a variety of different speech-to-text software formats and systems and methods for interfacing a stenographic computer with an electronic communications network. receiving live speech, converting the speech to text, and transferring the text to a user. As desired, the speech or text can be translated into one or more different languages. Systems and methods for real-time conversion and transmission of speech and text are provided.
